

UHDWPE Bonded continuous filament sewing thread.

Dynebond is mostly used in the sail manufacturing, marine upholstery, heavy lifting industry and many outdoor applications.

Dynebond is an internal bonded sewing thread which ensures perfect stitching during multidirectional operations.

Properties

- Ultra high tenacity (15 times stronger than steel and >3 times stronger than same size continuous filament polyester sewing thread.)
- Inherently perfect UV resistance
- Not effected from chemicals,oil, acids and alcalies
- Premium abrasion resistance
- Softer and lighter than polyester sewing thread
